INDEX

Page

ABBE, ERNST, C., RANDOLPH, L. F., and EINSET, JOHN: Comparison of Shoot Apex and Leaf Development and Structure in Diploid and Tetraploid Maize ... 47-76
Acorns, chemical analyses ... 37, 41-42, 44-45
Actinomyces scabies—
common scab fungus, variation and physiologic specialization. L. A. Schaal ... 169-186
cultural variation ... 172-178
cultures—
designation ... 170
effects of nutrients, experiments ... 174-175
pathogenicity tests ... 178-182, 185
sectoring frequency ... 172-173
growth and sectoring, factors affecting ... 174-178
isolates—
and cultures, color characteristics ... 170, 171, 184
morphology ... 173-174
relation to russeting of potatoes ... 181-182
source and general characteristics ... 170-172
pathogenicity, greenhouse tests ... 178-182, 185
strains—
color changes, investigations ... 170, 171, 184
studies ... 169-186
AFANASIEV, MICHEL: A Study of Dormancy and Germination of Seeds of *Cercis canadensis* ... 405-420
Alfalfa, boron accumulation, factors affecting ... 248-251, 260, 265, 269, 271
Allium—
cepa × *A. fistulosum*, smut resistance study ... 1-7
fistulosum—
× *A. cepa*, smut resistance, study ... 1-7
smut resistance ... 1, 2
spp., hybrid, smut resistance. J. C. Walker, H. A. Jones, and A. E. Clarke ... 1-8
Allotropa burrelli—
adult, description ... 159-160
egg and parasite body, developmental stages ... 160-164
embryonic development, description ... 159-165
gregarious parasite of *Pseudococcus comstocki*, biology. D. W. Clancy ... 159-167
larva, description ... 164-165
life cycle ... 166
polyembryony, studies ... 164
pupa, description ... 165
sex ratio and number of parasites per host ... 165-166
ANDREW, R. H., BRINK, R. A., and NEAL, N. P.: Some Effects of the Waxy and Sugary Genes on Endosperm Development in Maize ... 355-371
Animals, farm—
progeny testing, plan ... 463-475
selection for important traits, effectiveness ... 463-472
traits—
measurement only after slaughter ... 468-470
of both sexes, measurement before breeding age ... 463-468
repeatable, expression only in female ... 470-472
Apple—
seedlings, inoculation with *Xylaria mali*, results ... 449-453
tree defoliation, effects on susceptibility to *Xylaria mali* infection ... 454-456
trees—
black root rot, host-parasite relations. J. S. Cooley ... 449-458
inoculation with black root rot pathogene, studies ... 450-457
susceptibility to *Xylaria mali* infection—
effect of defoliation ... 454-456
effect of seasonal maltreatments ... 453-454

Page

Artichoke, boron accumulation, factors affecting ... 254-255, 263, 264
Asparagus, boron accumulation, factors affecting ... 254-255, 263
Aster yellows virus, reaction of *Lactuca* spp. to under field conditions. Ross C. Thompson ... 119-125

Bacterial ring rot—
inoculation of tomatoes, method ... 310-311
of tomato and eggplant, studies ... 309-325
organism—
on solanaceous hosts ... 321-323
See also *Corynebacterium sepedonicum*.
symptoms in—
eggplant ... 321
tomato ... 311-312
Bacterium, ring rot, relation to tomato and eggplant. R. H. Larson ... 309-325
BAKKE, A. L., GAESSLER, W. G., PULTZ, L. M., and SALMON, S. C.: Relation of Cultivation to Depletion of Root Reserves in European Bindweed at Different Soil Horizons ... 137-147
Barley, boron accumulation, factors affecting ... 245, 257, 264
Bean—
kidney, boron accumulation, factors affecting ... 244-245, 256, 264, 271
lima, boron accumulation, factors affecting ... 244-245, 258, 264
Red Mexican, reaction to curly top virus ... 153-156
Beet—
boron accumulation, factors affecting ... 250-253, 261, 264, 265, 269, 273
leafhopper—
development—
differential effects of temperature on. F. H. Harries ... 127-136
effect of temperature, investigations ... 128-134
egg development, effect of temperature ... 128-130
nymphal development, effect of temperature ... 128-134
mosaic, anatomical and cytological studies. Katherine Esau ... 95-117
See also Sugar beet.
Beta vulgaris. *See* Beet; Sugar beet.
Bindweed, European—
carbohydrate content, at various depths in soil, experiments ... 137-147
cultivation at different soil horizons, relation to depletion of root reserves. A. L. Bakke, W. G. Gaessler, L. M. Pultz, and S. C. Salmon ... 137-147
dry-matter content at various depths in soil, experiments ... 137-146
root reserves, depletion at different soil horizons, relation to cultivation. A. L. Bakke, W. G. Gaessler, L. M. Pultz, and S. C. Salmon ... 137-147
roots—
chemical analysis ... 139
collection, methods ... 137-138
death at various levels ... 137, 144, 146
nitrogen content, at various depths in soil, experiments ... 137-147
sugar content at different depths in soil, experiments ... 137-146
Black root rot—
of apple trees, host-parasite relations. J. S. Cooley ... 449-458
See also under host and specific name.
Blackberry, boron accumulation, factors affecting ... 241, 242-243, 254, 265
Blueberry, highbush—
growth, effect of soil treatments. T. A. Merrill ... 9-20
soil requirements, experiments ... 11-20

Page

Bluegrass, Kentucky, boron accumulation, factors affecting ... 246-247, 258, 269, 271
Boron—
accumulation—
in plants—
Frank M. Eaton ... 237-277
discussion ... 267-269
See also under specific plant.
deficiency in plants—
Frank M. Eaton ... 237-277
discussion ... 264-266
relation to boron movement ... 274-275
distribution in different parts of plants, discussion ... 269
in plants—
effect on growth, with other symptoms, under climatic conditions ... 242-263
study material and methods ... 237-241
movement in plants—
examination ... 269-270
relation to deficiency ... 274-275
solubility in leaf tissues ... 270-274
toxicity in plants—
Frank M. Eaton ... 237-277
discussion ... 266-267
Botanical analysis, point-quadrat method, use on mixed pasture vegetation, studies. William B. Drew ... 289-297
Brink, R. A., Andrew, R. H., and Neal, N. P.: Some Effects of the Waxy and Sugary Genes on Endosperm Development in Maize ... 355-371
Broadleaf—
nurseries—
damping-off in Great Plains region. Ernest Wright ... 77-94
in Great Plains region, location, soil, and climate ... 77-79
seedlings—
cultural practices in Great Plains region ... 79-80
damping-off—
description ... 80-81
hazard in nursery soils ... 82-83
studies in Great Plains region ... 77-93
species—
infection with damping-off fungi in sterilized and unsterilized soil, pathogenicity tests ... 86-92
resistant to damping-off, list ... 82
susceptible to damping-off, list ... 81

Cabbage, boron accumulation, factors affecting ... 246-247, 259
Calendula, boron accumulation, factors affecting ... 248-249, 259, 271
California-poppy, boron accumulation, factors affecting ... 250-251, 261
Callistephus chinensis. *See* Aster.
Carbohydrate content of—
roots of European bindweed at various depths in soil, experiments ... 137-147
sugary and waxy corn kernels investigations ... 358-361
Carroll, W. E., Krider, J. L., and Fairbanks, B. W.: Value of Soybean Meal Prepared from Damaged (Bin-Burned) Soybeans as a Feed for Growing Swine ... 383-387
Carrot, boron accumulation, factors affecting ... 246-247, 258, 269, 273
Catalase activity in redbud seed during afterripening ... 417-419
Cattle, infestation by liver fluke ... 401
Celery, boron accumulation, factors affecting ... 248-249, 260, 264
Cercis canadensis—
seeds, dormancy and germination, study. Michel Afanasiev ... 405-420
See also Redbud.
Cherry, boron accumulation, factors affecting ... 242-243, 254-255, 265, 268
Chromosome—
behavior in—
crossbreeding of strawberries ... 435-447
Panicum virgatum, studies ... 327-351
doubling, in maize, studies ... 47-74
Chufa, composition, analysis ... 39, 43, 44, 45

Page

Clancy, D. W.: Biology of *Allotropa burrelli*, a Gregarious Parasite of *Pseudococcus comstocki* ... 159-167
Clarke, A. E., Jones, H. A., and Walker, J. C.: Smut Resistance in an *Allium* Species Hybrid ... 1-8
Climate, effect on eggs of *Haemonchus contortus* ... 285-286
Color of *Actinomyces scabies* strains, investigations ... 170, 171, 184
Connecticut, *Scolytus multistriatus* dispersion, study ... 301, 304-306
Convolvulus arvensis. *See* Bindweed, European.
Cooking, effect on color of potato, varietal differences ... 21-31
Cooley, J. S.: Some Host-Parasite Relations in the Black Root Rot of Apple Trees ... 449-458
Corn—
boron accumulation, factors affecting ... 246-247, 259
canning qualities, effect of sugary and waxy genes, experiments ... 363-369
endosperm development, effects of genetic factors ... 356-370
kernels—
carbohydrate content, effect of sugary and waxy genes, investigations ... 358-361, 369
chemical composition at 12 stages of maturity ... 359
moisture content, effect of sugary and waxy genes, investigations ... 361-362, 369-370
sugar content, effect of sugary and waxy genes, experiments ... 358-360, 369
sugary and waxy, histological studies ... 367-368
tenderness, effect of waxy and sugary genes ... 364-367, 369
weight, effect of sugary and waxy genes, investigations ... 363-364, 369
sugary and waxy, canning trials ... 368-369
See also Maize.
Corynebacterium sepedonicum—
cause of bacterial ring of tomato and eggplant ... 309, 324-325
reaction of tomato varieties to ... 320
See also Bacterial ring rot organism.
Cotton, boron accumulation, factors affecting ... 254-255, 263, 264
Cowpea, boron accumulation, factors affecting ... 244-245, 256, 264, 271
Curly top—
immunity, acquired, in tobacco and tomato. James M. Wallace ... 187-214
plant recovery from, explanatory hypotheses, discussion ... 210-211
virus strains—
role in acquired immunity ... 209-210
stability ... 156

Oxygen—
  effect on germination of afterripened redbud seeds ... 414-415
  requirements of *Haemonchus contortus*, investigations ... 280-282

Panicum-lespedeza mixture, analysis—
  by point-quadrat apparatus, comparison of different methods ... 293-297
  comparison of methods ... 289-292
Panicum virgatum—
  characters, regression, covariance studies ... 342-344
  chromosome—
    distribution ... 344-347
    fixation and stains ... 328
    number—
      and morphology ... 329-332
      and sources ... 327-328
  gross morphology, relation to chromosome number ... 332-341
  isolates, statistical treatment ... 329
  morphological measurements ... 328-329
  plant height and panicle length, covariance with other characters ... 342-344
  polyploidy ... 329-332
  variation, analysis. Etlar L. Nielsen ... 327-353
Pansy, boron accumulation, factors affecting ... 242-243, 256
Parsley, boron accumulation, factors affecting ... 248-249, 260
Pasture vegetation—
  analysis, comparison of methods ... 289-292
  mixed, botanical analysis by use of point-quadrat method, studies. William B. Drew ... 289-297
Pea, boron accumulation, factors affecting ... 244-245, 258, 272-273
Peach, boron accumulation, factors affecting ... 242-243, 255, 268
Persimmon, boron accumulation, factors affecting ... 242-243, 255, 265
Physiologic specialization in common scab fungus, *Actinomyces scabies*. L. A. Schaal ... 169-186
Pigs—
  feed value of soybean meal prepared from bin-burned soybeans, experiments ... 383-387
  See also Swine.

Page

Plant—
  hosts, sugar-beet curly top virus, classified list ... 150-151
  leaf tissue, boron accumulation, solubility ... 270-274
Plants—
  boron—
    accumulation—
      and tolerance ... 269
      characteristics, diversity in different varieties, experiments ... 238-276
      climatic effects ... 269
      movement and deficiency, correlations ... 274-275
    deficiency—
      analysis ... 264-266
      study material and methods ... 237-241
      toxicity, and accumulation. Frank M. Eaton ... 237-277
    semi-tolerant, list ... 244-251
    sensitive, list ... 242-245
    tolerant, list ... 250-255
    traces and movement ... 269-270
  immunity from curly top, causation, discussion ... 206-211
  recovery from curly top, explanatory hypotheses, discussion ... 210-211
  resistant to sugar-beet curly top, list ... 151
  wilting—
    point, osmotic concentration of soil solution ... 228-229
    range, soil moisture movement ... 231-232
Plastochron, meaning of term ... 49
Point-quadrat method of botanical analysis of mixed pasture vegetation, studies on use. William B. Drew ... 289-297
Polyploidy in *Panicum virgatum* ... 329-332
Potato—
  boron accumulation, factors affecting ... 246-247, 259, 264
  scab fungus, variation and physiologic specialization, experiments ... 169-186
  varieties—
    blackening after cooking. G. H. Rieman, W. E. Tottingham, and John S. McFarlane ... 21-31
    reaction to scab in different localities ... 182, 185
    susceptibility to *Actinomyces scabies*, comparison ... 171
Potatoes—
  cooked—
    blackening—
      environmental influences ... 29-30
      genetic influences ... 27-29
      of hybrid populations ... 24-25
      relation to location ... 25
      relation to season ... 25-26
      relation to varieties and strains ... 23-24
  russeting, investigations ... 181-182
POWERS, LEROY: Meiotic Studies of Crosses between *Fragaria ovalis* and × *F. ananassa* ... 435-448
Pressure-membrane apparatus, use in soil-moisture tests ... 215-234
Progeny testing, livestock, plan ... 463-475
Pseudococcus comstocki—
  gregarious parasite of, *Allotropa comstocki*, biology. D. W. Clancy ... 159-167
  pest of apple trees ... 159
PULTZ, L. M., BAKKE, A. L., GAESSLER, W. G., and SALMON, S. C.: Relation of Cultivation to Depletion of Root Reserves in European Bindweed at Different Soil Horizons ... 137-147
Pythium ultimum, cause of damping-off of broadleaf seedlings ... 84, 86, 87-92

Radish, boron accumulation, factors affecting ... 248-249, 259-260, 264, 265, 269, 273, 274-275
Rams, infection with *Haemonchus contortus*, experiments ... 423-433
RANDOLPH, L. F., ABBE, ERNST C., and EINSET, JOHN: Comparison of Shoot Apex and Leaf Development and Structure in Diploid and Tetraploid Maize ... 47-76

Redbud— Page
seed—
acid treatment, effects on germination.. 407-411
afterripening and germination—
effects of various treatments on, data. 407-412
microchemical tests 412-413
catalase activity during afterripening... 417-419
chemical treatments, effects on germination 407-412
dormancy and germination studies 405-419
enzymes, microchemical tests 412-413
germination—
factors affecting 413-416
forcing by seed treatments 407-412
microchemical changes during 413-414
stratification period, length in relation to germination after seed treatments 409-412
sulfuric acid treatment, effects on germination 407-411

microflora—
after fermentation with yeast 377
before fermentation 375, 379, 380
curly top, immunity. James M. Wallace 187-214
fermentation, experiments 373-381
immunity—
acquired, from curly top. James M. Wallace 187-214
from curly top—
discussion 206-209, 211
transfer to tomato, studies 190-196, 202-205, 207-208
plants—
healthy, back grafts from tomato passively immunized against curly top 193-195
topping, effect upon curly top activity 208
use in immunizing tomato against curly top, methods 190-193
Turkish, reaction to curly top virus 153, 156
Tomato—
boron accumulation, factors affecting 250-251, 261, 272
clones passively immunized against single known virus strains, reaction to different virus strains 202-205
curly top, immunity—
James M. Wallace 187-214
acquired—
from tobacco, studies 190-196, 202-205, 207-208
role of virus strains 199-202
immunity—
acquired, from curly top. James M. Wallace 187-214
from curly top, discussion 207-208, 209-210, 211
immunization from curly top, passive, by means of tobacco plants, methods 190-193
plants—
bacterial ring rot symptoms 311-312
immunized against curly top—
actively, reaction to different virus strains, experiments 199-202
actively, study 188-190
controlled inoculations with virus, experiments 198-199
field tests 196-199
natural exposure to virus, experiments 196-198
passively, back grafts to healthy tobacco plants 193-195
passively, greenhouse reinoculation tests 195-196
passively, reaction to different virus strains 202-205
inoculation by ring rot bacterium, method 310-311
ring rot bacterium relationship. R. H. Larson 309-325
seed, transmission of bacterial ring rot organism 317-318
tissue, break-down due to ring rot infection, studies 312-317
varieties, reaction to *Corynebacterium sepedonicum* 320
TOTTINGHAM, W. E., REMAN, G. H., and MCFARLANE, JOHN S.: Potato Varieties in Relation to Blackening after Cooking 21-31

Vaccinium corymbosum. *See* Blueberry, highbush.
Vegetation, pasture—
analysis, comparison of methods 289-292
mixed, botanical analysis by use of point-quadrat method, studies. William B. Drew 289-297
Vetch, boron accumulation, factors affecting 250-251, 260-261
Violet, boron accumulation, factors affecting 242-243, 256
Virus—
diseases, immunity, acquired, in plants, discussion 205-211
strains of sugar-beet curly top. N. J. Giddings 149-157
Vitamin B_1, effects on redbud seed germination, experiments 412, 415
